

Development of seismic activity at the Hellisheidi Geothermal Power Plant since the autumn of 2011

On one hand, the figure shows the magnitude of seismic activity and, on the other hand, the accumulated number of seismic tremors during the period. The seismic data are obtained from the national seismometer network of the Icelandic Meteorological Office (IMO).

In 2023 one earthquake over magnitude 3 occurred in ON Power's reinjection fields. No changes were made in the reinjection rates in 2023 and no alerts were issued to the IMO and the Department of Civil Protection and Emergency Management.
